DETAILED ACTION

Oath/Declaration

The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:
It does not include the inventors' signatures.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 7 recites the limitation "the double cutting tool" in the last line. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 4-7, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Foldesi (US 4,682,463).

Foldesi discloses an apparatus for heat sealing containers and forming of cut out membranes 22 by punch assembly 124. The membranes 22 are carried by membrane star 110; see figure 6.

Regarding claims 5 and 6, in one embodiment the membrane web 182 is at a feed angle (approximately 30) to the cutting/punching station 184. The cutting device 100 is a triple cutting tool however Foldesi recognizes the substitution of a double cutting device; see column 10, lines 54-59.

5. Claims 1-4 and 8-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Foldesi et al. (US 5,522,200).

Foldesi et al. disclose an apparatus for sealing containers comprising turret 18 with vacuum heads 40 for advancing cut out membranes from supply element 36. Heater head 51 performs the heat sealing operation once the vacuum positioning system transfers the membrane cut out in place.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
